

ECCF News - March 2020

It's your once a month round-up of climate news you may have missed.

Announcement

[ECCF Podcast Episode 3](#)

The third episode of the ECCF Podcast is out now! In this episode, Dr. Toni Klemm sits down with Jeff Martin to discuss his research on how bison in North America are affected by climate change.

Pitch your work for the ECCF Podcast!

Are you doing interesting climate research or work related to climate and climate change? We'd like to hear from you! Record a 1-minute audio message telling us about you and your work, and we'll include your message in one of our next podcast episodes. Send us an email at eccfpodcast@gmail.com to find out more or to send us your message

Seminars, Webinars, Lectures & Resources

[Faith and Reasoning in Climate Change Views](#)

March 5, 2020

Join us for a discussion of two unique perspectives on the frameworks that individuals use to grapple with climate change. Understanding the impacts of reason- and faith-based modes of thinking on climate acceptance will allow scientists, educators, and advocates to have more productive conversations about contentious climate issues.

[Redesigned NOAA Climate Explorer Tool](#)

NOAA updated and expanded its Climate Explorer, a resilience planning tool for cities, communities, and consultants, based on feedback from users. Search by county, city, or zip code for future climate projections, exceedance of custom thresholds, historic vs. future comparisons, and more. Read more about the updates [here](#), and check out the tool [here](#).

Climate Change Research in the News

[From Farm to Pint, How Will Beer Weather Climate Change? \(Wisconsin Public Radio\)](#)

For generations, Wisconsin has been a leader in beer production and craft breweries have exploded in number. Craft breweries have satisfied a desire for local products, but as climate change threatens a stable supply chain, smaller craft breweries are more vulnerable than their larger counterparts. WPR explores how the state can adapt to the effect climate change is having on some of Wisconsin's most iconic foods.

[Re-thinking 'tipping points' in ecosystems and beyond \(Science Daily\)](#)

When a grassland becomes a desert, or a clearwater lake shifts to turbid, the consequences can be devastating for the species that inhabit them. These abrupt environmental changes, known as regime shifts, are the subject of new research in Nature Ecology & Evolution which shows how small environmental changes trigger slow evolutionary processes that eventually precipitate collapse.

Jobs, Internships, MS & PhD Positions

Climate Adaptation Intern

World Wildlife Fund (WWF), seeks a Climate Adaptation Intern to support WWF [Climate Crowd](#), a crowdsourcing initiative that supports a network to gather data on how climate change is impacting people and nature, and supports projects that help rural communities adapt while reducing pressure on biodiversity.

Resilience Fellow Position

The Center for Climate and Energy Solutions (C2ES) seeks one individual to focus on climate change science, impacts and resilience. The Fellow will contribute to C2ES's technical, policy, and communications work related to climate science, climate impacts, and resilience.
